German Water and Energy GmbH (GWE)

is the holding company for the pumpenboese - SBF- Hagusta group which enjoys an excellent international reputation for their products and services. Customers are supplied with products according to state of the art technology.

Factories and sales offices

in Western Europe, Eastern Europe, Africa and the middle East as well as joint ventures in Africa and Asia clearly reflect the international scope of business and closeness to the clients. Main fields of activities are development, manufacture and sales of high quality products for the exploration, exploitation and transport of ground waters. All these activities, as well as the production of special applications for the oil and gas industry, will be expanded in the coming years in cooperation with international partners.

As much as international markets pose different requirements to the supplier, they have one essential thing in common.

Closeness to the client

is the key word for success in business. Intense identification with client's ideas and goals has always been highly emphasized at pumpenboese. Since more than 70 years, and in cooperation with our partners all over the world, we are presenting innovative solutions in the fields of water well construction, pump- and drilling technology, as well as supply- and waste disposal technology. A sizeable number of patent rights as well as research and development activities prove the innovative capacity of the group. Examples are the development of NORESTA® pipe connection, flexible rising main hoses, or solar powered hand pumps.

Each country and each region have their specifics. Each project has its own individual background.

Diversity

means for us that we can offer an individual solution for any requirement.

Over decades such pretensions have led to an unrivaled accumulation of rich experience which is reflected in our range of products. Whether pumps, pipes and fittings of all kind and dimensions, made of either HDPE, u-PVC, steel or stainless steel, we supply fast and reliable directly from our warehouses. One stop shop - GWE group offers complete solutions out of their own fabrication to the small enterprise as well as to big multi national corporations.

Today, through our modern factories at Luckau, Nordhausen, Renchen and Lodz we are in a position to react fast and flexible to any demand of our clients.

We are members of various committees of experts, such as DVGW, Figawa, DIN, Foreign trade committee, as well as advisers to trade fairs. Quality management of the GWE group is solidly based on DIN EN ISO 9001:2000. Each company of the group has it's own quality control manager- a system which is employed also by international concerns. Our own production facilities -always at the latest state of technology- coupled with a continuous engagement in research and development and a highly classified quality management guaranty ensures top quality.

Customers can rely on the experts of the GWE group at any time. Our competence and extensive advice help to prevent risks and guarantee that orders are carried out according to the customer's requirements and conceptions.

Please also put your trust with a partner who knows how to work the switches and who - like you - braves new challenges.

Contact us!

Our range of products includes:

- drilling rigs and accessories, repair jobs for all brands
- submersible motor pumps, made of chromium-nickel steel
- sludge pumps, capacity up to 1000 m³/h
- repair jobs for all brands of pumps
- booster pressure units c/w pipelines
- pump control systems
- complete range of accessories for well construction
- well shafts made of polyethylene
- well covers, well heads made of stainless steel
- riser pipe systems, made of u-PVC, stainless steel, coated steel
- drainage pipes
- bridge slotted screen pipes and casing pipes made of stainless steel
- stainless steel wire-wrapped screens, also in combination with u-PVC casing pipes
- u-PVC casing and screen pipes for water well acc. to DIN 4925
- gravel pre-coated screen pipes acc. to DIN 4922
- NORIP® pipes for ground water quality control and monitoring wells
- all kinds of drilling muds and additives, gravel, and sealing clay for well construction
- hydrometric equipment, dip tube caps, contact meters, water level recorder
- hand pumps, incl. solar powered units
- flexible hoses as rising mains for potable water or for fire fighting equipment
- complete geothermal utilization program
- irrigation systems
- complete PEHD programs
 - PEHD pipes for gas, water and waste water acc. to DIN 8074/ 8075
 - PEHD pipes slotted or punched for water wells and waste disposal sites
 - fittings, like bends, t-pieces, branches, special shaped parts
 - PEHD fittings for welding and push socket connection, butt- and socket welding machines
 - housing shafts for waste disposal sites, water meters, canal- and domestic water connections
